WORK EXPERIENCE

FME AG

07/2025 - 10/2025

Data Migration Intern

- Gained hands-on practice with relational databases (PostgreSQL, Oracle – PL/SQL) and data governance in ECM/content management platforms (Documentum, Veeva, Cara) utilizing SQL as well as platform-specific query languages (DQL, VQL, CQL);
- Applied fundamentals of data migration by designing and executing ETL workflows to move and validate data between source and target systems;
- Implemented a lightweight ETL workflow in Python using Veeva Vault API to fetch document audit trails and ingest them into PostgreSQL; Utilized Postman and curl to access / test data via APIs and Python for automation tasks such as batching, validation and database interactions;

Robert Bosch – Bosch Engineering Center Cluj

07/2023 - 01/2025

Embedded C Software Engineer (Working Student)

- Built a diagnostic communication software stack for an electric kart, with layered modules for communication, message routing and diagnostic functions (STM32 MCUs and Embedded C);
- Gained hands-on experience in Embedded C software development, system integration and ECU testing within large-scale automotive projects, collaborating with cross-functional teams from India and Austria, while building familiarity with development lifecycles, version control and ticketing tools;

EDUCATION

Master's Degree in Computer Science (Distributed Systems in Internet)

Babes Bolyai University of Cluj-Napoca

Cluj-Napoca • 07/2025 - 07/2027

Bachelor's Degree in Computer Science in English

Babes Bolyai University of Cluj-Napoca

Cluj-Napoca • 07/2022 - 07/2025

PROJECTS

AI-Powered Educational App (Flutter, Python FastAPI, SQLite)

Educational mobile app for learning finance basics, including features such as stock price prediction using LSTM (time-series forecasting model from scikit-learn), news sentiment and credibility analysis with fine-tuned TinyBERT transformer models (PyTorch + Transformers), used custom datasets of relevant financial and credibility terms / phrases; real-time financial quiz generation via Gemini API; demo investing section using daily data from Yahoo Finance API;

Stock Portfolio Data Pipeline

Implemented a Python ETL pipeline for collecting, validating and storing stock market and personal portfolio data from Tradeville and Yahoo Finance APIs into PostgreSQL (hosted on Supabase); the pipeline runs daily via GitHub Actions;

Real-Time Collaborative Whiteboard (React, Spring Boot, WebSockets, MongoDB)

Application supporting multi-user editing inside shared rooms; implemented live synchronization of objects (create, move, resize, delete, text edit) using WebSockets (STOMP, SockJS); designed an event-based architecture where clients emit structured whiteboard events and the server broadcasts updates to all users in that room; persisted whiteboard events in MongoDB for state recovery and replay; handled authentication with JWTs and cookies;

SKILLS

Git, Data Structures, OOP, Design Patterns, .NET, Java / Java Servlets, SQL Server, PostgreSQL, Python

Languages: English
